SAURAV RAUTHAN

AI Engineer | Agentic AI, RAG & LLM Applications

Tehri Garhwal, Uttarakhand | +91 7895609354 | sauravrauthan82@gmail.com | LinkedIn | GitHub

SUMMARY

Final-year AI/ML engineer with hands-on project experience in computer vision, deep learning, and full-stack model deployment (Flask, Supabase, Netlify, Streamlit). Comfortable across the Generative AI stack — LLMs, RAG, LangChain, vector databases, and prompt engineering — with a strong Python foundation and a bias toward shipping working, production-style systems rather than notebooks. Fast learner, self-driven, and available to start immediately on remote agentic-AI product work.

TECHNICAL SKILLS

Generative AI & Agentic: LLMs, RAG (Retrieval-Augmented Generation), LangChain, Hugging Face Transformers, Prompt Engineering, OpenAI/Gemini APIs, Vector Databases (ChromaDB)

AI & Deep Learning: Neural Networks, CNNs, Computer Vision, Generative Adversarial Networks (GANs)

Languages: Python, Java, C, SQL, HTML/CSS, R

ML & Libraries: PyTorch, Scikit-Learn, MediaPipe, OpenCV, NumPy, Pandas, Matplotlib, Data Structures & Algorithms (DSA)

APIs, Deployment & MLOps: REST APIs, FastAPI, Flask, Docker, CI/CD (GitHub Actions), Model Deployment, Streamlit, Netlify

Databases & Cloud: Supabase (PostgreSQL), Google Cloud Platform (GCP), Vertex AI Studio

Developer Tools: Git/GitHub, VS Code, Jupyter Notebook, Google Colab, Postman

PROJECTS

AI-Powered Resume-JD Matcher (ATS Scorer) | *Python, FastAPI, Streamlit, spaCy, Sentence Transformers, Groq API, Supabase*

- Built a full-stack web app that scores resume-JD fit using semantic similarity (Sentence Transformers) rather than plain keyword matching, with a categorized breakdown across formatting, keywords, content, and ATS compatibility.
- Integrated the Groq API (Llama 3) to generate actionable, LLM-written improvement suggestions on top of the NLP score.
- Implemented Supabase auth (email + Google OAuth) so users can save and revisit past analyses, and added PDF report export via WeasyPrint + Jinja2.

AI Gym Coach | *Python, OpenCV, MediaPipe (Pose Estimation), NumPy, Flask, Netlify*

- Built a real-time computer-vision app using OpenCV and MediaPipe for human posture tracking and automatic rep counting.
- Computed real-time joint angles to detect incorrect form and return instant feedback, with attention to inference latency for a smooth user experience.
- Deployed a responsive web interface on Netlify for low-latency, cross-device performance.

AI-Powered Attendance System | *Python, OpenCV, Face Recognition, Supabase (PostgreSQL), Flask, HTML/CSS*

- Built an end-to-end attendance portal automating student attendance via real-time facial recognition, from model integration to a production-style backend.
- Integrated a Supabase (PostgreSQL) backend for authentication and real-time attendance logging, and engineered a dual-panel interface for registration and record tracking.
- Optimized face-matching latency for fast, multi-face scanning — the kind of inference-cost/latency trade-off central to production AI features.

EDUCATION

Dr. APJ Abdul Kalam Institute of Technology Aug 2023 — July 2026

Bachelor of Technology in Artificial Intelligence and Machine Learning, Champawat, Uttarakhand

Relevant Coursework: Data Structures, Algorithm Analysis, Artificial Intelligence, Machine Learning, Operating Systems, Computer Networks, Computer Architecture, Database Management

ACHIEVEMENTS / EXTRACURRICULAR

- Secured 2nd position at UCOST (Uttarakhand State Council for Science and Technology) for presenting an innovative tech-driven project at the state level.
